About me

A lifelong technology enthusiast with a passion for computers that began at an early age, starting with a Commodore 64. This early exposure to technology sparked a self-driven journey of learning and exploration. Over the years, I have independently acquired extensive knowledge in various aspects of computing, from hardware to professional software, through self-study and hands-on experience. My commitment to self-education led me to explore diverse areas, including web technologies and programming through personal projects and documentation. Driven by curiosity and a strong desire to innovate, I am now eager to improve my self-taught knowledge and skills further. My background in diverse fields has honed my ability to adapt quickly, think critically, and effectively manage complex challenges in technology.

Skills

Team Management: Experienced in leading and managing teams to achieve project goals

Time Management: Proven ability to manage multiple tasks effectively in fast-paced environments.

Problem Solving: Strong critical thinking and problem-solving skills applied across various roles.

Detail-oriented: Keen eye for details, ensuring high-quality outcomes in all tasks.
